

# BIHLER ORIGINAL SPARE PARTS

Decisive components of your success

**BIHLER**

### Maximum machine availability

Bihler original spare parts are decisive components of your success. They guarantee maximum availability of your Bihler machine. Only from us can you obtain your spare and wearing parts in original Bihler quality.

### Flawless logistics for shortest possible delivery times

With the multitude of standard machines and customer-specific manufacturing solutions, our database contains more than 700,000 parts. We have many of these parts constantly available for you in stock; both for machines from the current delivery programme as well as for older models. Our experienced spare parts team and flawless logistics and delivery organisation guarantee the shortest possible delivery times.

### „Known Consignor“

Since 2014, Bihler is certified as a „Known Consignor“. This status ensures that Bihler can ship spare parts in terms of a „secure supply chain“ even faster by air without delays and additional costs.

### Customised tool spare parts packages

For tool spare parts and wearing parts, we can offer you customised storage contracts. The parts package for your Bihler tools will be arranged together with you and then stored with us. You thereby save on certain storage expenses and can be sure that any downtime periods of your manufacturing system will be reduced to a minimum.

### Loan or replacement equipment

As a special service, Bihler offers loan or replacement equipment for many components. For example, presses, electronic components, hydraulic pumps, radial feed grippers (RZV 2) or GSE or MSE units can quickly be exchanged for overhauled and quality checked used parts. You profit from the compatibility of components and can continue with production.
